

As a user, I want to be able to enter the time I want to wake up and the hours I want to sleep, so I can figure out when to go to bed.

As a user, I want to be able to save my settings in various profiles in order to more conveniently regulate my weekly schedule.

As a user, I want to customize the text message notification to let me know when to go to sleep so I can get to bed on time.

As a user, I want to be able to choose what time to get my sleep notification, so I can better plan out my night.

As a user, I want a main menu that is easily navigable so I can understand how to use the app.

As a UI Designer, I want the interface to be reliable and efficient, to provide as much of a streamlined process as possible.

Bugs only occur within this user story:

As a user I want to be able to add multiple profiles that represent different alarms.

The delete profile option will sometimes lead into the settings page before prompting the user.

It should only prompt the user. In our case the user will have to go back a page before being prompted.

There is a maximum number of profiles at 10. Any more will be added to the SharedPreferences folder, where we save the key-value pairs, but will not show up properly on the list

An empty or null string might cause an unforeseen error
